

The "Inspection and Destruction of Noxious Weeds" section of the Nevada Revised Statutes, Chapter 555.150 advises that the control of noxious weeds is the responsibility of every landowner or occupant.

So it's not just a good idea,

**IT'S THE LAW!**

White Pine, Lincoln, and Nye Counties

## TRI-COUNTY WEED CONTROL

Tri-County Weed Control started through a collaboration of White Pine, Lincoln and Nye Counties in 1999. It was the first non-taxed based, comprehensive noxious weed control program in the West. It is funded through contracts and agreements with private and public landowners and agencies. Using the latest technology, it performs noxious weed control operations in three roles: *Education,*

*Inventory,*  
*and Treatment.*

**Education:** Tri-County Weed Control offers support with educational contributions. We offer training and materials on all aspects of weed control including: weed identification; inventory and GPS data of land; chemical applications; control and prevention of infestations.

*Teaching kids hands-on about weeds.*

**Inventory:** Tri-County Weed Control contracts with public and private parties for weed inventory. We have the ability to inventory large land areas with our inventory teams or contract one person for smaller, private jobs. Prices include labor, vehicles, GPS data collection and colored maps generated with inventory data.

**Treatment:** Tri-County Weed Control contracts with public and private parties for the treatment of noxious weeds. All applications are recorded using GPS. We have three spray options: two large spray trucks, each with a 500-gallon tank and a trailer with an additional 1,000 gallons for fieldwork and large infestations; four 6-wheel ATVs, each with a 50-gallon tank for treatments in areas where the trucks cannot access; and backpack sprayers for small jobs and those inaccessible by truck and/or ATV.

Technology is used to increase communication; catalog data; ease of transition between plant species; track inventory data; track treatments; track management effectiveness; fulfill reporting requirements; invoicing; and to assist in explaining program components to various partners.

*Treatment for control of Scotch thistle at Little Joe Springs in Newark Valley*

*September of 2002, before first treatment.*

*Little Joe Springs in July, 2005.*
